
PROJECT DESCRIPTION

I Developed a Bucket List app to learn the fundamentals of mobile application development using Android Studio. The app features an engaging user interface with sections for "Places to Go" and "Things to Do," enabling users to organize and track their goals visually. Key learnings and skills gained include:

- **Android Studio:** Acquired hands-on experience with creating layouts and managing app development lifecycle.
- **UI/UX Design:** Designed an intuitive and visually appealing interface using XML.
- **Java Programming:** Implemented functionality such as checkboxes and data handling.
- **Project Management:** Planned, designed, and executed the project independently, adhering to objectives and timelines.

This project solidified my foundational knowledge in Android development and gave me practical exposure to building functional mobile applications.
